

Workflow for Citizen Science Projects

Step	Citizen Science Toolbox	IHP-WINS	Cycle
0	Preparatory steps Create a registration page for different users: - Citizen Science Project Manager – Individuals linked to an organization - Citizen Scientists: any Individual	Preparatory steps - Develop a Citizen Scientist role, not linked to an organization - Add a Citizen Science component/tab to Organizations/Members and the 4 CS Initiatives (Be Resilient, IslandWatch and RiverWatch, C4Water) -	
	Toolbox Registration A new Citizen Science Project Manager registers on the Toolbox: 1) Individuals with an existing IHP-WINS account 2) New Individuals/Organization	Toolbox Registration Colab form version integrated into the toolbox for Citizen Science 1) Add CS tab to their roles in WINS 2) Add Organization to WINS as and add CS tab to their roles in WINS	
1	Context Analysis and Shared Vision - The Citizen Science Project Manager (PM) sets up a stakeholder engagement meeting to co-develop the shared vision and to define the role of CS to address local water challenges and establish shared expectations - Co-develop objectives, research questions and intended outcomes - (optional) The PM writes a short project document using a standard template (or use an online template that can be filled out)	Context Analysis and Shared Vision - Guidance questions to define the scope of the project - Develop a generic workshop programme to engage stakeholders - Generate a standard CS project template	1, 2 and 3
2b	Citizen Science Project Request A Citizen Science Project Manager (PM) requests the setup of a new CS project: - Select Initiative (Be Resilient, IslandWatch, RiverWatch) - Select country(ies) - (Optional) Select Biosphere Reserve from a predefined list - Select the target area or region (which will be used to draw the map on the landing page) - Choose a name for the CS Project - Provide a short description of the CS Project - Confirm Or edit CS project URL - (optional) upload the CS project document	Citizen Science Project Request Setup integrated form for new CS Projects: - Add to the corresponding Initiative under the CS tab - Add to countries - (optional) Add to Biosphere Reserve - Add to Organization	4
		IHP-WINS Admin approves request for new CS Project: - An administrative role is assigned to the Individual/Organization in the	4

		CS Toolbox as a Project Manager - URL is created for the Citizen Science Project under the right Initiative (Be Resilient, IslandWatch, RiverWatch) - A generic Citizen Science Project landing page is created with the title, short description, empty map for the region chosen, basic counters 'at a glance' are added at the top (XX Citizen Scientists, XX Citizen science observations, XX Sites monitored, XX Member states supported) - A link/QR code is added on the bottom of the CS Project page for Citizen Scientists to join the Project.	
3	Setup of the survey(s) - The PM enters its admin page and either selects an existing survey or creates a new one for their CS Project	Setup of the survey(s)	4
4	Citizen Science data collection - The PM trains interested Citizen Scientists on the CS data collection techniques and on the CS Toolbox - The PM invites Citizen Scientists to register using the Project Page, direct link or QR code. - Citizen Scientists register as CS in IHP-WINS to a CS Project from a list or from the link on the CS Project landing page - CS collect data through the eCS toolbox app	Citizen Science data collection - Colab Integrated form in the Toolbox for registering Citizen Scientists (see step 0) - Counters update when new data is collected - Public data is made visible on the public project landing page / Private data is only visible on the internal project page.	5
5	Citizen Science knowledge generation - PM and Citizen Scientists analyse the data they have collected using the data viewer and analyzer - The AI tool allows to create a tailored report for a predefined number of variables (e.g water quality)	Citizen Science knowledge generation - Data Analyzer is setup with differential data access roles - AI tool developed (with IRCAI?) to generate meaningful insights from raw data.	6 and 7
	- (optional) PM organizes workshop with CS and stakeholders to review the outcomes of the data collection and knowledge generation phase		8 and 9
6	Public Project Landing Page for Outreach - PM review the landing page - PM adds upcoming news, events, videos, photos	Public Project Landing Page for Outreach - Make the Landing Page editable for PM - Add an integrated form to add news, events, videos, photos	10
